Over a decade of professional IT operations, network engineering, cybersecurity and systems administration experience in various industries. Possess strong skills in research, troubleshooting, and education that help build team players and problem solvers. Strong passion for identity management and healthcare information technology.

TECHNICAL SKILLS AND TECHNOLOGIES

Ruby on Rails, SQL, React, Javascript | RedHat/CENTOS Linux, Proxmox, BIND DNS, Ansible | Fortinet, Unifi | Splunk

TECHNICAL PROJECTS

Rouge with Petsite v0.2 - [GitHub](#) | [Demo](#) |[Developer Commentary](#)
A React/Rails project to combine the roguelike and petsite genres as a single page web app
- Designed and implemented database schema in ActiveRecord and Postgres to persist game data between sessions
- Utilized React and HTML5 Canvas to draw and update an interactive game environment, React-Tailwind to style responsive website to host game environment
- Used React-Nivo to make screen-reader accessible graphs for displaying vital statistics of pets

Discogs Utility - [Github](#) | [Demo](#) | [Developer Commentary](#)
Visually access physical music library collection data in clean, modern interface.
- Use secure token to sign authenticated requests to Discogs API
- Use Javascript to display album art in attractive manner, allowing a user to click through to see more information about albums in collection

Proxmox Automation with Ansible v1 - [Github](#)
Orchestrate Proxmox container virtualization with Ansible.
- Deploy configured file, web, and data service containers customized to example organizations
- Enable faster and more reliable service and operating system updates with less downtime
- Built custom safety features to ensure orchestration is resilient if environment is manually changed
